

# Quick Deployment Guide - EMF Safe Haven

## 🎯 What Was Fixed

Your Next.js app was being deployed as a static site, but it has API routes that need server-side rendering. I've configured it properly for Netlify.

### Key Changes:

1.  Added `@netlify/plugin-nextjs` for SSR support
2.  Removed incorrect static export configuration
3.  Fixed routing to work with Next.js App Router

## 🚀 How to Deploy - Choose One Method

### Method 1: Grant GitHub App Access (Easiest)

1. Visit: [https://github.com/apps/abacusai/installations/select\\_target](https://github.com/apps/abacusai/installations/select_target)
2. Select repository: `emf-safe-haven`
3. Grant “Read and write” permissions for Contents
4. Come back and tell me - I’ll push the code automatically

### Method 2: Manual Git Push

```
# In your terminal (local machine):
cd /path/to/emf-safe-haven

git init
git add .
git commit -m "Fix Netlify deployment configuration"
git remote add origin https://github.com/ACIM2025/emf-safe-haven.git
git push -u origin main
```

### Method 3: Download & Upload to GitHub

1. **Download:** `/home/ubuntu/emf-safe-haven-FIXED.zip`
2. **Extract** the ZIP file
3. **Go to:** <https://github.com/ACIM2025/emf-safe-haven>
4. **Click:** “uploading an existing file”
5. **Drag & drop** all extracted files
6. **Commit** the changes

## ⌚ After Pushing to GitHub

### Automatic Deployment (If GitHub Connected)

Netlify will automatically detect the push and redeploy with the new configuration.

## Manual Deployment

1. Go to your Netlify dashboard
  2. Navigate to your site ([helpful-arithmetic-cfe59b](https://helpful-arithmetic-cfe59b.netlify.app/))
  3. Click **Deploys** → **Trigger deploy** → **Deploy site**
- 

## Verify It Works

After deployment:

1. Visit: <https://helpful-arithmetic-cfe59b.netlify.app/>
2. **Expected:** See your EMF Safe Haven landing page (not 404)
3. **Test:** Any forms that use API routes should work

## Check Build Logs

In Netlify, look for:

Essential **Next.js** Build Plugin  
[@netlify/plugin-nextjs](#)

## Files Location

- **Fixed Project:** /home/ubuntu/github\_repos/emf-safe-haven/
  - **Download ZIP:** /home/ubuntu/emf-safe-haven-FIXED.zip
  - **Push Script:** /home/ubuntu/github\_repos/emf-safe-haven/PUSH\_TO\_GITHUB.sh
- 

## Configuration Files Changed

File	What Changed
netlify.toml	Added Next.js plugin, removed static config
next.config.js	Removed output mode to enable SSR
package.json	Added <code>@netlify/plugin-nextjs</code> dependency

---

## Troubleshooting

### Still seeing 404 after deployment?

1. **Clear Netlify cache:**
  - Site Settings → Build & deploy → Clear cache and retry deploy

**2. Check environment variables:**

- Make sure `NEXT_OUTPUT_MODE` is not set to 'export'

**3. Verify plugin installed:**

- Build logs should show `@netlify/plugin-nextjs`
- If not, run `npm install` before deploying

## API routes not working?

**1. Check that API files exist:**

- `app/api/contact/route.ts`
- `app/api/newsletter/route.ts`
- `app/api/orders/route.ts`

**2. Verify the Essential Next.js plugin is active (check build logs)**

---

 **Need Help?**

If you encounter any issues:

1. Check the detailed `DEPLOYMENT_FIXES_SUMMARY.md`
  2. Review Netlify build logs for errors
  3. Ensure all dependencies installed: `npm install`
- 

**Ready to deploy? Choose a method above and let's get your site live!** 🎉
